Find electrical work worth pursuing

Start with your actual delivery business

Research [ACTUAL ELECTRICAL / WIRING CAPABILITIES] in [SERVICE ZIPs / RADIUS]. Use FY2020–FY2026 through 30 September 2026, with FY2025 and FY2026 separately. Reported 238210 includes electrical and other wiring, such as telecommunications, alarm and network installation; it is not a power-only census. Search purchased services across relevant descriptions and codes, keeping wider construction and equipment purchases separate. Do not add overlapping totals. Research does not change our company profile or record a decision.

Three questions to answer

Who buys near me? Keep the actual facility, service, office, performance address and award IDs.

What size work could I pursue? Compare size bands, periods and verified examples with crew, credentials, equipment and cash.

What may be coming next? Separate open bids, forecast plans and contract-end watch leads; check the access route.

Find the purchased service inside broad classifications

National to local

Start nationally, then narrow to a state, reported city, ZIP and actual facility. Use performance geography rather than the recipient address; preserve five-character ZIPs and deduplicate combined areas.

238210 includes other wiring. The explicit power/electrical/lighting/generator keyword subset is a sensitivity, not a manually checked census. Read the purchased scope.

A construction forecast can report 236210 even when the specialty work is generator replacement. Keep adjacent-code work separate from the baseline.

Read the measures

Awards are distinct contracts/orders with activity; actions are new-award or modification transactions. Net obligations are funding less reductions, not payments or open bids.

Full potential includes options and can span years or sites. Positive size exclusions leave historical funding and activity intact. <$0.01M is a small positive amount.

Turn a local signal into an evidence trail

Who buys near me?

Match the service, facility, office and performance address. Cleveland VA's amended notice uses 44106; an older cover uses 44131. Check the current notice and the actual equipment site before planning travel.

The historical examples are corroborated records, not live invitations or proof of the Cleveland case incumbent.

What size work could I pursue?

Use the market insights for actual bands, medians and counts. Compare periods and vehicle conditions before treating potential value as annual revenue.

Gather personnel credentials, testing equipment, similar experience and subcontract commitments. A generic license alone does not establish every qualification.

What may be coming next?

Fort Dix's generator forecast is outside Ohio and the 238210 baseline. It names the regional construction vehicle RMACC II. Verify holder access, the prime/subcontract route and the released solicitation.

A potential contract end can include unexercised options and does not prove a new opportunity. Keep dated watch leads.

Apply the current requirement to your business

Cleveland testing and maintenance

Read the amended 23 October 2026, 3 p.m. EDT deadline and the 16 October, 3 p.m. EDT questions deadline with the current attachments. Reconcile older cover information.

NETA or equivalent certification, the 10-hour construction safety course, licensed permanent staff and separate experience conditions require evidence. Ask precise questions about a permitted equivalent route.

Comparative evaluation favors technical capability over price. A higher price may be selected when added technical or past-performance value warrants it.

Keep the decision auditable

Use the worksheet and matrix for proof, cost assumptions, reports, safe execution, acceptance and unresolved conditions.

Qualified Bid helps organize source evidence and procurement judgment. Your actual business facts and decision remain distinct from any recorded profile recommendation.
