Cleveland VA: test the whole delivery proposition

The actual requirement

36C2502Q0014: electrical power distribution equipment testing, inspection and maintenance at Louis Stokes Cleveland VA Medical Center, 10701 East Boulevard, Cleveland, Ohio 44106.

Amended deadline: 23 October 2026, 3 p.m. EDT. Questions: 16 October, 3 p.m. EDT. The older cover still shows 19 October/44131; verify the current action.

Base: 1 November 2026–31 October 2027, plus four annual options through 31 October 2031. No job budget is published; options are not guaranteed work.

Current official notice: https://sam.gov/opp/2cee3ab4c28c4d9180034705e5e8e97c/view

Why this case is useful

A real local facility and complete bound documents connect qualifications, execution, evidence and comparative value to a pursuit decision.

The amended official page lists the same two resource identities as the captured text. This corroborates attachment identity; it is not an independent byte-redownload claim.

Credentials and experience are separate gates

People and company requirements

Experienced, licensed permanent staff; electrical distribution must be the business's primary specialty. Technicians must be certified by NETA or an equivalent certifying organization, with each completing 10-hour construction safety training.

Minimum five continuous years of specified maintenance, inspection and testing experience; separately, five years within the last seven of successful identical/similar equipment maintenance. Provide references; do not invent five required projects.

Inspect the equipment before bidding. Confirm any equivalent-certification or partner route with the buyer. Course completion is not itself a license or certification. Source document 2, paragraphs 1547–1552 and 1592–1594.

Price follows a defensible delivery plan

Scope and evidence

Include testing, maintenance, inspections, safety and calibration, approved outage hours, quality controls and reports. Four hard copies plus an emailed written report are due within seven calendar days of a visit.

Additional repairs require contracting-officer approval and funds or an approved purchase order before work. Source document 2, paragraphs 77, 1482 and 1565–1597.

Evaluation and options

Technical capability is more important than price. Comparative evaluation may select a higher-priced quotation when added technical or past-performance value warrants it. All options are evaluated; exercise is not guaranteed.

Quote the base, options and grand total; hold prices for 60 days unless an addendum changes the period. Check acceptance, invoice conditions and approved VA information handling before assuming cash dates. Source document 2, paragraphs 1585–1588, 1634 and 1650–1665.

Your next action

Use the evidence matrix and worksheet to identify unresolved proof, site-visit, equivalent-certification, scope-frequency, reporting, price/cash and deadline questions. Historical award values are not this quote’s price.
